PURPOSE AND RISKS

The bravery beads program is designed to provide acknowledgement of the experiences chronically ill patients face as they receive treatment at John Hunter Children's Hospital. Children and young people collect different beads representing individual procedures and milestones whilst visiting hospital or receiving specific treatments at home. Each patient's collection of beads represents the child and family's unique and personal journey.

Risk: There is a potential for choking/strangulation for young children

The risk is minimised by
- providing beads and thread to parents and/or caregivers of children under three years of age
- storing the beads in closed containers out of reach of young children
- providing beads to school-age children in the presence of their parent and/or caregiver

Risk Category: Clinical Care & Patient Safety

GUIDELINE

This Guideline does not replace the need for the application of clinical judgment in respect to each individual patient.

Patients diagnosed with a chronic or long-term illness may be commenced on the bravery bead program shortly after diagnosis, or during treatment at the discretion of the staff. On commencement of the program the staff member must explain the choking risk of small beads for young children to the parent/caregiver and document this in the patient’s medical record. On commencement the patient will receive coloured beads to spell their first name and string to begin their bravery beads collection. In addition to this the child/young person and the parent/caregiver will be given a bravery beads legend.

Beads are given to patients and/or their parent/caregiver by staff to acknowledge clinical procedures, treatment, and milestones as described in the bravery beads legend.

Beads MUST NOT be directly given to children under three years of age. For young children and infants beads must be given to the parent/caregiver to ensure safety of the patient.

Staff Preparation

It is mandatory for staff to follow relevant: “Five moments of hand hygiene”, infection control, moving safely/safe manual handling, documentation practices and to use HAIDET for patient/carer communication: Hand hygiene Acknowledge, Introduce, Duration, Explanation, Thank you or closing comment.
IMPLEMENTATION, MONITORING COMPLIANCE AND AUDIT

To ensure compliance with this document:

- all additional staff who will be responsible with disseminating bravery beads will be orientated to this guideline and the associated risks during induction by the relevant Clinical Nurse Consultant
- any concerns or issues with the process raised by staff or families will be addressed in a timely manner

APPENDICES

CONSULTATION

1. Child Life Therapy:
   - Michelle Perrin: Head of Department – Music, Art & Child Life Therapy - JHCH
   - Veronica Oakley: Child Life Therapist - Music, Art & Child Life Therapy - JHCH

2. Nursing
   - Carol Doherty: Clinical Nurse Consultant – Children’s Cancer and Haematology Service - JHCH
   - Michelle Neylan: Clinical Nurse Consultant – Diabetes - JHCH
   - Linda Cheese: Clinical Nurse Consultant – Respiratory - JHCH

FEEDBACK
