CefTAZidime

Newborn use only

Alert	High risk medicine. The Antimicrobial Stewardship Team	n recommends thi	is drug is listed u	inder the	
	following category: Restricted.				
Indication	Treatment of meningitis and sepsis caused by susceptible gram-negative organisms (especially				
Action	Pseudomonas aeruginosa) and susceptible gram-positive organisms. Bactericidal agent which inhibits cell wall synthesis in susceptible bacteria.				
Drug type	Cephalosporin antibiotic.				
Trade name		ne luno Ceftazidir	ne Sandoz Forti	ım Hosnira	
made name	Ceftazidime Alphapharm, Ceftazidime Aspen, Ceftazidime Juno Ceftazidime Sandoz, Fortum, Hospira Ceftazidime.				
Presentation	1 g and 2 g vial				
Dose	50 mg/kg/dose				
		I			
	Corrected Gestational Age/Postmenstrual Age	Postnatal Age	Interval		
	< 30 ⁺⁰ weeks	0–28 days	12 hourly		
	< 30 ⁺⁰ weeks	29+ days	8 hourly		
	30 ⁺⁰ –36 ⁺⁶ weeks	0–14 days	12 hourly		
	30 ⁺⁰ –36 ⁺⁶ weeks	15+ days	8 hourly		
	37 ⁺⁰ –44 ⁺⁶ weeks	0–7 days	12 hourly		
	37 ⁺⁰ –44 ⁺⁶ weeks	8+ days	8 hourly		
	≥ 45 weeks	0+ days	8 hourly		
Dose adjustment	Renal impairment: Consider increasing dosage interval i	n those with signi	ficant renal imp	airment.	
Maximum dose	150mg/kg/day				
Total cumulative dose					
Route	IV, IM				
	1 g vial: Add 8.9 mL of water for injection to the 1 g vial 2 g vial: Add 8.2 mL of water for injection to the 2 g vial entire contents of the vial and add water for injection concentration of 100 mg/mL. IV Infusion Add 8.9 mL water for injection to the 1 g vial to make 1 for injection to the 2g vial to make 200 mg/mL FURTHER DILUTE From the 1 g vial Draw up 3 mL (300 mg of ceftazidime make a final volume of 15 mL with a final concentration from the 2 g vial draw up 1.5mL (300mg of Ceftazidime to make a final volume of 15mL with a final concentration make a final volume of 15mL with a final volume of 15m	al to make a 200m to make a final vo 100 mg/mL solution e) and add 12 mL o on of 20 mg/mL. e) and add 13.5m tion of 20 mg/mL	or of sodiume of 20 mL voor of sodium chlorical Lof sodium chlorical Lof sodium chlorical control of sodium chlorical control control of sodium chlorical control control of sodium chlorical control	Oraw up the with a final on L of water de 0.9% to oride 0.9%	
Administration	2 g vial: Add 8.2 mL of water for injection to the 2 g vial entire contents of the vial and add water for injection concentration of 100 mg/mL. IV Infusion Add 8.9 mL water for injection to the 1 g vial to make 2 for injection to the 2g vial to make 200 mg/mL FURTHER DILUTE From the 1 g vial Draw up 3 mL (300 mg of ceftazidime make a final volume of 15 mL with a final concentration From the 2 g vial draw up 1.5mL (300mg of Ceftazidime to make a final volume of 15mL with a final concentration make a final volume of 15mL with	al to make a 200m to make a final vo 100 mg/mL solution e) and add 12 mL o on of 20 mg/mL. e) and add 13.5m tion of 20 mg/mL	or of sodiume of 20 mL voor of sodium chlorical Lof sodium chlorical Lof sodium chlorical control of sodium chlorical control control of sodium chlorical control control of sodium chlorical control	Oraw up the with a final On the one of water	
Administration	2 g vial: Add 8.2 mL of water for injection to the 2 g vial entire contents of the vial and add water for injection concentration of 100 mg/mL. IV Infusion Add 8.9 mL water for injection to the 1 g vial to make 2 for injection to the 2g vial to make 200 mg/mL FURTHER DILUTE From the 1 g vial Draw up 3 mL (300 mg of ceftazidime make a final volume of 15 mL with a final concentration From the 2 g vial draw up 1.5mL (300mg of Ceftazidime to make a final volume of 15mL with a final concentration make a final volume of 15mL with a final volume of 15mL wit	al to make a 200m to make a final vo 100 mg/mL solution e) and add 12 mL o on of 20 mg/mL. e) and add 13.5m tion of 20 mg/mL	or of sodiume of 20 mL voor of sodium chlorical Lof sodium chlorical Lof sodium chlorical control of sodium chlorical control control of sodium chlorical control control of sodium chlorical control	Oraw up the with a final On L of water de 0.9% to Oride 0.9%	
Administration	2 g vial: Add 8.2 mL of water for injection to the 2 g vial entire contents of the vial and add water for injection concentration of 100 mg/mL. IV Infusion Add 8.9 mL water for injection to the 1 g vial to make 1 for injection to the 2g vial to make 200 mg/mL FURTHER DILUTE From the 1 g vial Draw up 3 mL (300 mg of ceftazidime make a final volume of 15 mL with a final concentration From the 2 g vial draw up 1.5mL (300mg of Ceftazidime to make a final volume of 15 mL with a final concentration make a final volume of 15 mL with a final volume of 15 mL with a final volume of 15 mL wi	al to make a 200m to make a final vo 100 mg/mL solution e) and add 12 mL o on of 20 mg/mL. e) and add 13.5m tion of 20 mg/mL	or of solution. In the solution of the solution of the solution of solution. It is a solution of solution. It is a solution of	oraw up the with a final of water de 0.9% to oride 0.9%	
	2 g vial: Add 8.2 mL of water for injection to the 2 g vial entire contents of the vial and add water for injection concentration of 100 mg/mL. IV Infusion Add 8.9 mL water for injection to the 1 g vial to make 1 for injection to the 2g vial to make 200 mg/mL FURTHER DILUTE From the 1 g vial Draw up 3 mL (300 mg of ceftazidime make a final volume of 15 mL with a final concentration From the 2 g vial draw up 1.5mL (300mg of Ceftazidime to make a final volume of 15mL with a final concentration make a final volume of 15mL with a final concentration make a final volume of 15mL with a final concentration make a final volume of 15mL with a final concentration make a final volume of 15mL with a final concentration make a final volume of 15mL with a final concentration make a final volume of 15mL with a final concentration make a final volume of 15mL with a final concentration make 3 mL water for injection to the 1 g powder for recommendation make 2 minutes. IV injection: give over at least 3 to 5 minutes. IV infusion: over 15–30 minutes	al to make a 200m to make a final vo 100 mg/mL solution e) and add 12 mL o on of 20 mg/mL. e) and add 13.5m tion of 20 mg/mL	or of solution. In the solution of the solution of the solution of solution. It is a solution of solution. It is a solution of	oraw up the with a final of water de 0.9% to oride 0.9%	
Monitoring	2 g vial: Add 8.2 mL of water for injection to the 2 g vial entire contents of the vial and add water for injection concentration of 100 mg/mL. IV Infusion Add 8.9 mL water for injection to the 1 g vial to make 1 for injection to the 2g vial to make 200 mg/mL FURTHER DILUTE From the 1 g vial Draw up 3 mL (300 mg of ceftazidime make a final volume of 15 mL with a final concentration From the 2 g vial draw up 1.5mL (300mg of Ceftazidime to make a final volume of 15 mL with a final concentration make a final volume of 15 mL with a final volume of 15 mL with a final volume of 15 mL with	al to make a 200m to make a final vo 100 mg/mL solution e) and add 12 mL o on of 20 mg/mL. e) and add 13.5m tion of 20 mg/mL	or of solution. In the solution of the solution of the solution of solution. It is a solution of solution. It is a solution of	oraw up the with a final of water de 0.9% to oride 0.9%	
Monitoring Contraindications	2 g vial: Add 8.2 mL of water for injection to the 2 g vial entire contents of the vial and add water for injection concentration of 100 mg/mL. IV Infusion Add 8.9 mL water for injection to the 1 g vial to make 2 for injection to the 2g vial to make 200 mg/mL FURTHER DILUTE From the 1 g vial Draw up 3 mL (300 mg of ceftazidime make a final volume of 15 mL with a final concentration From the 2 g vial draw up 1.5mL (300mg of Ceftazidime to make a final volume of 15mL with a final concentration make a final volume of 15mL with a final concentration water and injection and 3 mL water for injection to the 1 g powder for reconstitution: give over at least 3 to 5 minutes. IV injection: over 15–30 minutes IM injection: not recommended. If IM administration is Renal function, liver function.	al to make a 200m to make a final volution make a final volution and add 12 mL on of 20 mg/mL. e) and add 13.5m tion of 20 mg/mL onstitution to main necessary, reconstitution necessary, reco	or of solution. In the solution of the solution of the solution of solution. It is a solution of solution. It is a solution of	oraw up the with a final of water de 0.9% to oride 0.9%	
Monitoring Contraindications Precautions	2 g vial: Add 8.2 mL of water for injection to the 2 g vial entire contents of the vial and add water for injection concentration of 100 mg/mL. IV Infusion Add 8.9 mL water for injection to the 1 g vial to make 2 for injection to the 2g vial to make 200 mg/mL FURTHER DILUTE From the 1 g vial Draw up 3 mL (300 mg of ceftazidime make a final volume of 15 mL with a final concentration From the 2 g vial draw up 1.5mL (300mg of Ceftazidime to make a final volume of 15mL with a final concentration Make a final volume of 15mL with a final concentration water a final volume of 15mL with a final concentration make a final volume of 15mL with a final concentration make a final volume of 15mL with a final concentration make 3 mL water for injection to the 1 g powder for recomplete in the 1 g	al to make a 200m to make a final volution make a final volution and add 12 mL of an of 20 mg/mL. e) and add 13.5m tion of 20 mg/mL onstitution to main the main add 13.5m to main add 13.5m to main add 13.5m to main add 13.5m to main and add 13.5m to main add 13.	or of 20 mL voor of sodium chlorid L of sodium chlorid ke a 260 mg/mL	oraw up the with a final on the original of water de 0.9% to original origi	
Administration Monitoring Contraindications Precautions Drug interactions Adverse	2 g vial: Add 8.2 mL of water for injection to the 2 g vial entire contents of the vial and add water for injection concentration of 100 mg/mL. IV Infusion Add 8.9 mL water for injection to the 1 g vial to make 2 for injection to the 2g vial to make 200 mg/mL FURTHER DILUTE From the 1 g vial Draw up 3 mL (300 mg of ceftazidime make a final volume of 15 mL with a final concentration From the 2 g vial draw up 1.5mL (300mg of Ceftazidime to make a final volume of 15 mL with a final concentration The make a final volume of 15 mL with a final concentration to make a final volume of 15 mL with a final concentration make a final volume of 15 mL with a final volume of 15 mL with a final volume of 15	al to make a 200m to make a final volution make a final volution and add 12 mL of an of 20 mg/mL. e) and add 13.5m tion of 20 mg/mL onstitution to main the main add 13.5m to main add 13.5m to main add 13.5m to main add 13.5m to main and add 13.5m to main add 13.	or of 20 mL voor of sodium chlorid L of sodium chlorid ke a 260 mg/mL	oraw up the with a final on the original of water de 0.9% to original origi	

ANMF consensus group CefTAZidime Page 1 of 3

CefTAZidime

Newborn use only

	Positive Coombs test	
	Superinfection following prolonged use (esp. Candida)	
Compatibility	Fluids: Sodium chloride 0.9%, glucose 5%, glucose 10%, Hartmann's.	
	Y-site: Amino acid solutions, aciclovir, anidulafungin, aztreonam, ciprofloxacin, dexmedetomidine, esmolol,	
	ibuprofen lysine, ketamine, labetalol, linezolid, morphine sulfate, sodium valproate, tacrolimus, tigecycline,	
	tobramycin, zidovudine.	
Incompatibility	Fluids: Sodium bicarbonate.	
	Y-site: Acetylcysteine, aminoglycosides – amikacin, gentamicin, tobramycin; amiodarone, atracurium,	
	azathioprine, azithromycin, calcium chloride, caspofungin, chloramphenicol, chlorpromazine, dobutamine,	
	erythromycin, fluconazole, ganciclovir, hydralazine, midazolam, pentamidine, phenytoin, promethazine,	
	protamine, sodium ascorbate, sodium nitroprusside, vancomycin, verapamil.	
Stability	Reconstitution with water for injection: Solution stable for 12 hours below 25°C and 24 hours at 2 to 8°C.	
	Reconstitution with lignocaine: Stable for 6 hours below 25°C and 24 hours at 2 to 8°C.	
Storage	Store vial below 25°C. Protect from light.	
Excipients	Sodium carbonate
